LIDA® Rod Anodes

**LIDA TSA™** is a trademark of Industrie De Nora

**LIDA® Rod Anodes** are comprised of a titanium substrate with a mixed metal oxide coating. The mixed metal oxide is a crystalline, electrically-conductive coating that activates the titanium and enables it to function as an anode.

**Anode Life** — Due to the extremely low consumption rates and dimensional stability of mixed metal oxide anodes, the electrical resistance of LIDA® Rod Anodes remain essentially constant with time. The high current density capacity of De Nora mixed metal oxide anodes has the added advantage of allowing high current overloads for initial polarization without causing harm to the anode. Anode life projections are accurately made using the lifetime graphs (See Figures 1-7 on back).

**De Nora LIDA® Rod Anodes** are available in the following standard sizes:
1/8” x 4’ • 1/4” x 4’ • 1/2” x 4’ • 3/4” x 4’

Selection of the anode coating is based on operating environment:

- **FW** Freshwater or Brackish Water
- **SWT** Seawater

**APPLICATIONS**
- Process Vessels
- Water Condenser Boxes
- Heat Exchangers
- Water Intake Structures

**FEATURES**
- High Current Output
- Low Coating Wear Rate
- Five Year Product Warranty
- Also available as Rod Anode Assemblies

**BENEFITS**
- Lower Cost Per Ampere Year
- Constant Electrical Resistance
- No Hassles

### Standard Rod Assemblies

CATHODIC PROTECTION

LIDA® Rod Anodes

Maximum Current for LIDA® Rod Anodes (life in years)

STD = standard
XL = extended life

Lifetimes for the
½" STD and the
½" XL are equivalent.
